Aim of this briefing. We present the cumulative number of confirmed cases of COVID-19 infection among CARICOM countries since the start of the outbreak, which we measure as the number of days since the first confirmed case in each country. We compare trajectories with selected countries further along the epidemic curve. This allows us to assess progress in restricting COVID-19 transmission compared to interventions in comparator countries. Epidemic progress is likely to vary markedly between countries, and these graphics are presented as a guide only. As of 6 Apr 2020, there is one country with more than 100 and 2 countries with more than 50 confirmed cases (Figure 1). The remaining 11 countries have confirmed case numbers ranging from 5 to 29 (Figure 2).

Graph 1. Cumulative cases in 4 CARICOM countries as of 6 Apr 2020

Graph 2. Cumulative cases in 10 CARICOM countries as of 6 Apr 2020
