COVID-19 trajectories for 14 CARICOM countries (Counts of Confirmed Cases)

Briefing created by staff of the George Alleyne Chronic Disease Research Centre and the Public Health Group of The Faculty of Medical Sciences, Cave Hill Campus, The University of the West Indies. Contact Ian Hambleton (ian.hambleton@cavehill.uwi.edu) for details of quantitative analyses. Contact Maddy Murphy (madhuvanti.murphy@cavehill.uwi.edu) for details of national public health interventions and policy implications.

Updated on: 7 Apr 2020 at 06:53:50

Aim of this briefing. We present the cumulative number of confirmed cases of COVID-19 infection among CARICOM countries since the start of the outbreak, which we measure as the number of days since the first confirmed case in each country. We compare trajectories with selected countries further along the epidemic curve. This allows us to assess progress in restricting COVID-19 transmission compared to interventions in comparator countries. Epidemic progress is likely to vary markedly between countries, and these graphics are presented as a guide only. As of 7 Apr 2020, there is one country with more than 100 confirmed cases, 2 countries with more than 50 confirmed cases, and 2 countries with more than 30 confirmed cases (Figure 1). The remaining 9 countries have confirmed case numbers ranging from 7 to 24 (Figure 2).

Graph 1. Cumulative cases in 4 CARICOM countries as of 7 Apr 2020

Graph 2. Cumulative cases in 10 CARICOM countries as of 7 Apr 2020
