Aim of this briefing. We present the cumulative number of confirmed cases and deaths (see note 1) from COVID-19 infection among CARICOM countries since the start of the outbreak (we define the outbreak length as the number of days since the first confirmed case in each country). In our first table, we summarise the situation among the 14 CARICOM member states (see note 2) as of 16 Jul 2020. We then summarise the situation each each country visually, describing cumulative cases, cumulative deaths, and outbreak growth rates.

Summary for 14 CARICOM countries

<table>
<thead>
<tr>

The Table below summarises the progression of the COVID-19 outbreak as of 16 Jul 2020. The first THREE columns IN BLUE summarise the number of cases. The next THREE columns IN RED summarise the number of deaths. The final column IN BLUE describes the growth rate of the outbreak in each country. The dark line represents the rate in the country. The shaded region represents the range of rates in the remaining countries and territories (see note 3).

Aim of this briefing. We present the cumulative number of confirmed cases and deaths (see note 1) from COVID-19 infection among the Caribbean UKOTS since the start of the outbreak (we define the outbreak length as the number of days since the first confirmed case in each country). In our first table, we summarise the situation among the UKOTS (see note 2) as of 16 Jul 2020. We then summarise the situation each country visually, describing cumulative cases, cumulative deaths, and outbreak growth rates.

**Data Source.** Dong E, Du H, Gardner L. An interactive web-based dashboard to track COVID-19 in real time. Lancet Infect Dis; published online Feb 19. https://doi.org/10.1016/S1473-3099(20)30120-1

**Countries and territories included in this briefing:** Countries and territories included in this briefing: CARICOM member states: Antigua and Barbuda, The Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, Suriname, Trinidad and Tobago. United Kingdom Overseas Territories (UKOTS): Anguilla, Bermuda, British Virgin Islands, Cayman Islands, Montserrat, Turks and Caicos Islands.

**Growth Rate.** The blue graph in the final column shows the number of cases on a different scale (called a logarithm scale). This gives us the growth rate over time, and is good for comparing progress against other countries. The shaded region behind the country growth curve is the range of outbreak growth for the remaining countries and territories. There are 14 CARICOM member states and 6 UKOTS included in this briefing, so this shaded region includes 19 countries. This range is represented by percentiles (darker blue region represents 25th to 75th percentile, lighter blue region represents 5th to 95th percentiles). All curves and regions are 7-day smoothed averages.
